

Photographic Services

Rebuild Photography is a photographic services agency specializing in documenting recovery efforts from natural disasters.

Worksite Documentation

2003 Grande Lagoon

Left: Hurricane Ivan - Grande Lagoon

On-site photography of disaster damage and future work sites provides reliable documentation of conditions before, during and after the event. The photo comparison on the left shows a deep water bayou adjacent to the Gulf of Mexico which was filled with the remains of homes and vehicles after Hurricane Ivan.

2005 Hurricane Ivan

Right:

Hurricane Ivan - Pensacola Beach
Sand moving and sifting was a major project for a year following both Hurricane Ivan in 2004 and Hurricane Dennis in 2005.

2004 Hurricane Ivan

2006 Grand Lagoon Reconstruction

2005 Beach Reconstruction

Below: Hurricane Ivan

Incremental work site photos of ongoing projects document contractor performance, such as, the restoration of disposal sites or roadway building projects.

2004 Hurricane Ivan - Lexington Disposal

2002 Pensacola Beach, FL

2005 Lexington Disposal Site Restoration

2005 Hurricane Ivan Reconstruction

Archived and Accessible

We will maintain a database so photos of specific subjects can be retrieved as needed from our website - www.rebuildphoto.com. The advantages of the Rebuild website are that all photographs can be browsed by map, category, date and tags. High-resolution images are stored online and can only be viewed only by authorized users who can share photos and projects. Others can view your photos only in a protected format under 400 pixels and those versions are imprinted with your company logo to prevent re-use. If your company owns a license to a photo, you can add it to a custom collection, add a note to it, or download a high-resolution version for use in your own company - related project. You can see photos of a particular type with the "Filters" box in the sidebar that allows you to see images using the criteria you specify. Photos can be deleted from the data base. The website adds versatility to presentations. Data is accessible anywhere there is a internet connection.

On-Site Photography

We will travel on location to shoot the photos you need. From flood damage to project documentation, professional-grade equipment and professional photographers guarantee professional results.

Our equipment includes the Nikon D2X, 12.4 megapixel camera, as well as the Nikon D50. Photo imaging software delivers maximum image quality from files.

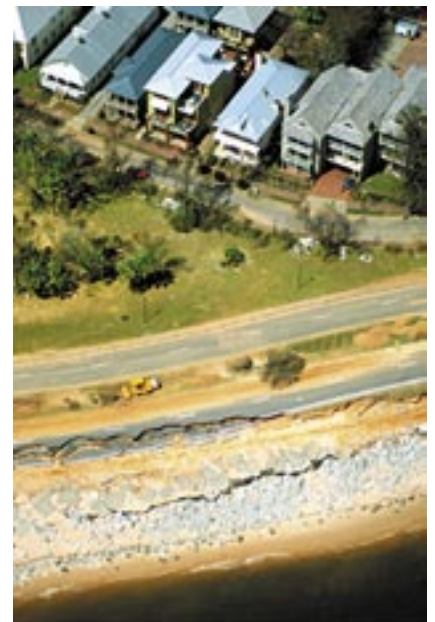

Aerial Photography

When the best way to document your subject is from the air, our skilled aerial photographers take to the sky from the vantage point of a helicopter or fixed wing aircraft.

2004: Hurricane Ivan - Pensacola, FL

On Film or Digital

Quick turnaround is critical in responding to changing situations. When you need the pictures immediately, we will get them to you, either in hard copy or electronically, as best suits your needs.

Digital Imaging

Images are manipulated and edited in Adobe Photoshop, which alters photographic images with additional elements, correcting color, retouching, thereby creating an illustrative look for ordinary photographs.

BECK
DISASTER RECOVERY, INC.
A national network of disaster recovery professionals

Disaster Recovery starts with **Disaster Planning.**

SERVICES

PRE-EVENT

- Comprehensive Disaster Management Planning
- On-site Site Selection/Planning
- Pre-Positioned Debris Hoist/Contracting
- Multi-Agency/State Coordination

POST-EVENT

- Disaster Program Management
- Critical Infrastructure Evaluation
- Collection & Debris Monitoring
- Data Management
- Search & Close Restoration
- Emergency Call Centers
- FEMA Reimbursement/Approvals
- Rights of Entry Approvals
- Waterways Clean-up Support

beckdis.com

Graphic Design

Combined with Adobe InDesign CS2, photographs can be inserted in brochures and adapted for convention display

Completed project assignments are submitted in books of photo sets which correspond to the titles in the website database for reference purposes. The books are a handy reference for bidding purposes and may serve as a presentation catalogue.

Slideshow Presentations

Professional photographs of damage caused by storms, floods, earthquakes or other natural events can expedite the release of federal disaster relief funds for reconstruction.

(below: excerpts from slideshow for Congressional Committee of Hurricane Ivan, January 2005)

Photographers On-Call

Photographers are available at all times. If a situation demands immediate action, we will be ready.

We can travel into a disaster area with our own self-contained accommodations in a Chinook motorhome.
